Title Triterpenoids with rare carbon skeletons from *Salvia hydrangea* : antiprotozoal activity and absolute configurations

Journal Journal of Natural Products

Volume 74

Number 10

Pages / Article-Number 2200-5

Salvadione C (1) and perovskone B (2), two new triterpenoids with rare carbon skeletons, were isolated from an antiplasmoidal n-hexane extract of *Salvia hydrangea*. The absolute configuration was determined by comparison of experimental and calculated electronic circular dichroism (ECD) spectra. In vitro activity against *Plasmodium falciparum* K1 strain, *Trypanosoma brucei rhodesiense* STIB 900 strain, and cytotoxicity in rat myoblast (L6) cells were determined. Compounds 1 and 2 showed in vitro antiplasmoidal activity, with IC(50) values of 1.43 and 0.18 μM and selectivity indices (SI) of 86.2 and 69.6, respectively. IC(50) values against *T. brucei rhodesiense* were found to be 4.33 and 15.92 μM, respectively.
