

Research Project

Functional organisation of invertebrate communities in running waters

Project funded by own resources

Project title Functional organisation of invertebrate communities in running waters

Principal Investigator(s) [Baur, Bruno](#) ; [Schmera, Dénes](#) ;

Organisation / Research unit

Departement Umweltwissenschaften / Naturschutzbioologie (Baur)

Project start 01.03.2009

Probable end 28.02.2015

Status Completed

The project focuses on how abiotic habitat template and biotic interactions influence community composition and diversity in running waters. Beside taxonomy-based approaches, special attention is paid on functional properties of communities, including functional composition and functional diversity. We also investigate the effect of invasive species on the native biodiversity.
