Title A note on two-dimensional transport with bounded divergence

Journal Communications Partial Differential Equations

Volume 31

Number 7

Pages / Article-Number 1109-1115

We prove uniqueness for two dimensional transport across a noncharacteristic curve, under the hypothesis that the vector field is autonomous, bounded, and with bounded divergence. We also obtain uniqueness for the Cauchy problem in $\mathbb{R}^t \times \mathbb{R}^{2x}$ under an additional condition on the local direction of the vector field.
