Title Anterolateral approach with tibial tubercle osteotomy versus standard medial approach for primary total knee arthroplasty : does it matter?

Journal BMC musculoskeletal disorders

Volume 11

Pages / Article-Number 167

The purpose of this prospective consecutive multicenter study was to investigate whether the type of surgical approach (medial parapatellar (MPA) or lateral parapatellar with tibial tubercle osteotomy (TubOT)) influences the early clinical and radiological outcomes of primary total knee arthroplasty (TKA).
