Title A European consensus report on blood cell identification : terminology utilized and morphological diagnosis concordance among 28 experts from 17 countries within the European LeukemiaNet network WP10, on behalf of the ELN Morphology Faculty

Journal British journal of haematology

Volume 151

Number 4

Pages / Article-Number 359-64

Keywords blood cell morphology, myelodysplasia, haematological malignancies diagnosis

This paper describes the methodology used to develop a consensual glossary for haematopoietic cells within Diagnostics-WP10 of European-LeukemiaNet EU-project. This highly interactive work was made possible through the use of the net, requiring only a single two-day meeting of actual confrontation and debate. It resulted in the production of a freely accessible tool that could be useful for training as well as harmonization of morphological reports in onco-haematology especially, without geographic limitation, not limited to European countries. Moreover, this collective work resulted in the production of a consensus statement, taking into account individual practices, collegial agreement and literature data.
