Title Restenosis after carotid endarterectomy : significance of newly acquired risk factors

Journal European journal of neurology

Volume 17

Number 3

Pages / Article-Number 493-8

Keywords carotid endarterectomy, long-term follow-up, progressive ICA disease, restenosis, vascular risk factors

In patients who had carotid endarterectomy (CEA), the significance of newly acquired cerebrovascular risk factors (CRFs) is unknown. Newly acquired CRFs are defined as CRFs not present prior to CEA (baseline CRFs) but acquired during long-term follow-up.
