Title Extended spectrum β -lactamase-producing Escherichia coli in neonatal care unit

Journal Emerging infectious diseases

Volume 16

Number 11

Pages / Article-Number 1758-60

An outbreak of extended-spectrum β -lactamase-producing Escherichia coli in a neonatal care unit began with transmission from a mother to her newborn twins during vaginal delivery. Subsequently, infection spread by healthcare worker contact with other neonates; a healthcare worker also was infected. Knowledge about transmission may improve infection control measures.
