Title Extent of hypoattenuation on CT angiography source images in basilar artery occlusion : prognostic value in the Basilar Artery International Cooperation Study

Journal Stroke

Volume 42

Number 12

Pages / Article-Number 3454-9

Keywords acute, basilar artery, CT angiography, prognosis, stroke

The posterior circulation Acute Stroke Prognosis Early CT Score (pc-ASPECTS) quantifies the extent of early ischemic changes in the posterior circulation with a 10-point grading system. We hypothesized that pc-ASPECTS applied to CT angiography source images predicts functional outcome of patients in the Basilar Artery International Cooperation Study (BASICS).
