Title A rifampicin-containing antibiotic treatment improves outcome of staphylococcal deep sternal wound infections

Journal The journal of antimicrobial chemotherapy

Volume 65

Number 8

Pages / Article-Number 1799-806

Keywords surgical site infections, sternotomy, cardiac surgery, management, rifampicin

Deep sternal wound infection (DSWI) is a severe complication after cardiac surgery, mostly caused by staphylococci. Little is known about the optimal antibiotic management.
