Title Associations between fluctuations in lung function and asthma control in two populations with differing asthma severity

Journal Thorax

Volume 66

Number 12

Pages / Article-Number 1036-42

Lung function is a major criterion used to assess asthma control. Fluctuation analyses can account for lung function history over time, and may provide an additional dimension to characterise control. The relationships between mean and fluctuations in lung function with asthma control, exacerbation and quality of life were studied in two independent data sets.
