Research Project

Brighton Collaboration Standardizing case definitions for Adverse Events Following Immunization (AEFI)

Third-party funded project

Project title Brighton Collaboration Standardizing case definitions for Adverse Events Following Immunization (AEFI)

Principal Investigator(s) [Heininger, Ulrich](#) ;

Organisation / Research unit

Bereich Kinder- und Jugendheilkunde (Klinik) / Pädiatrie (Frey)

Department

Project start 01.01.2009

Probable end 30.11.2010

Status Completed

The Collaboration will develop standardized case definitions of AEFI, with particular relevance to pre-qualified vaccines including yellow fever, Japanese encephalitis, influenza, and rotavirus vaccines. It will develop 2-3 case definitions/year as prioritized by WHO. Deliverables 2009: The Collaboration will provide WHO with AEFI case definitions and guidelines for their global use for "Collection, analysis, and presentation of AEFI data", "diarrhea", "Guillain-Barré syndrome", and "Overall local reactions".
