Research Project

Usage of meta-analyses in psychological research

Project funded by own resources

Project title Usage of meta-analyses in psychological research

Principal Investigator(s) [Kossowsky, Joe](#) ;

Organisation / Research unit

Departement Psychologie / Klinische Psychologie und Psychotherapie (Gaab)

Project start 01.10.2011

Probable end 01.10.2014

Status Completed

Meta-Analyses refers to the statistical analyses that are used to synthesize summary data from a series of studies. In our project, we utilize this method to investigate various research questions with regard to placebo research, especially in the field of child- and adolescent psychology, and adherence research.
