Active transport of proteins into the nucleus

**JournalArticle (Originalarbeit in einer wissenschaftlichen Zeitschrift)**

**ID** 153824

**Author(s)** Wagner, P.; Kunz, J.; Koller, A.; Hall, M. N.

**Author(s) at UniBasel** [Hall, Michael N.](#) ;

**Year** 1990

**Title** Active transport of proteins into the nucleus

**Journal** FEBS Letters

**Volume** 275

**Number** 1-2

**Pages / Article-Number** 1-5

**Keywords** Amino Acid Sequence; Animals; Biological Transport; Active; Cell Compartmentation; Molecular Sequence Data; Nuclear Envelope/\*metabolism/ultrastructure; Nuclear Proteins/chemistry/\*metabolism; Receptors; Cell Surface/metabolism; Regulatory Sequences; Nucleic Acid

Nuclear proteins are actively and posttranslationally transported across the nuclear envelope. This transport is a highly selective process that can be divided into two steps, receptor-binding followed by translocation through the nuclear envelope. Receptor-binding is mediated by nuclear localization signals that have been identified in many nuclear proteins. Translocation is energy-dependent and occurs through the nuclear pore complex.
