Title A quantitative Chevalley-Weil theorem for curves

Journal Monatshefte für Mathematik

Volume 171

Number 1

Pages / Article-Number 1-32

Keywords Chevalley-Weil theorem, Integral points, Rational points, Ramification, Puiseux series

The classical Chevalley-Weil theorem asserts that for an étale covering π of projective varieties over a number field K , the discriminant of the field of definition of the fiber over a K -rational point is uniformly bounded.

We obtain a fully explicit version of this theorem in dimension 1.
