

Research Project

Identification and pre-clinical development of novel integrin modulators

Project funded by own resources

Project title Identification and pre-clinical development of novel integrin modulators

Principal Investigator(s) [Krähenbühl, Stephan](#) ; [Gygax, Daniel](#) ;

Organisation / Research unit

Bereich Medizinische Fächer (Klinik) / Klinische Pharmakologie (Krähenbühl)

Departement Pharmazeutische Wissenschaften / Pharmakologie (Krähenbühl)

Project start 01.01.2013

Probable end 31.12.2015

Status Completed

Inhibitors of the Lymphocyte function-associated antigen 1 (LFA1) have been shown to modulate lymphocyte function and to act as immunosuppressants. The aim of the study is to design novel modulators of LFA1 and to characterize these substances pharmacologically and toxicologically in vitro and in vivo in experimental animals.
