Title A harmonic way to transdisciplinarity : experience from Global Health Development

Journal Gaia

Volume 25

Number 3

Pages / Article-Number 204-206

Aiming at generating innovative solutions to mitigate global health challenges through working along the continuum from innovation to application harmonically leads to a transdisciplinary understanding of and practice for, health and social development. The One Health approach is presented as a case study where a transdisciplinary concept and approach is validated in different social, cultural and ecological settings, and is subsequently put into public health practice leading to a measurable impact for human and animal health and well-being of the communities concerned.
