Project start 01.07.2017

Probable end 31.12.2020

Status Completed

Research and education are fundamental to sustainable development. This project entitled Education for Development (EFORD) aims at improving academic and vocational education of researchers and professionals who work on and in development and conflict-affected contexts. By improving the coordination between distinct educational institutions (universities, universities of applied sciences, vocational training schools, independent research centers) and their curricula it will reduce the gap between research results and their actual uptake. EFORD works together with social sciences, natural sciences and health sciences to draw on findings and transcend traditional disciplinary clusters. In terms of policies, EFORD follows an SDG16+ approach according to which the promotion of peace is closely linked to the development of just and inclusive societies. Health policies and natural resource and ecosystem management policies are crucial to the development and to the well-being of all societies. In terms of research, EFORD will concentrate on the generation of "interface-knowledge" between the three policies mentioned and on science-practice transfer knowledge.

Keywords Education, Development, Sustainability, North-South Cooperation, SDG, Interdisciplinarity, research-practice, peace and conflict, health, natural resources, ecosystem management
