Pages / Article-Number 258-269

This study explores stakeholder experiences and perspectives on end-of-trial obligations at the close of a phase II/III Pediatric Malaria Vaccine Trial (PMVT) [GSK/PATH-MVI RTS, S] (NCT00866619). We conducted 52 key informant interviews with major stakeholders of an international multicentre PMVT in Ghana and Tanzania. The responses fell into four main themes: (a) Communicating End-of-Trial, (b) Maintaining Health Care Services, (c) Dissemination of Results, and (d) Post-Trial Access. Interviewee responses shared important practical experiences and insights that complement current thinking in the literature on research ethics guidance: (a) accompany end-of-trial communication with information on personal and family health care responsibilities, (b) establish public health indicators to measure the impact of research on a health care system.
