Addressing Bribery and Favouritism in the Tanzanian Health Sector: a Behavioural Approach

Project funded by own resources

Project title Addressing Bribery and Favouritism in the Tanzanian Health Sector: a Behavioural Approach

Principal Investigator(s) [Baez Camargo Lujambio, Claudia](#) ;

Co-Investigator(s) [Persian, Ruth](#) ; [Sambaiga, Richard](#) ; [Stark, Tobias](#) ;

Organisation / Research unit

Basel Institute on Governance

Project start 01.01.2019

Probable end 31.12.2020

Status Completed

This project will use a rigorous experimental approach to implement and test the impact of anti-corruption behavioural interventions aimed at addressing bribery and favouritism in the Tanzanian health sector. The project builds on the findings of a previous DFID-funded research project "Corruption, Social Norms and Behaviours in East Africa" that detailed the crucial role played by informal social networks and social norms of reciprocity in driving corrupt behaviours in the Tanzanian health sector. Based on this research, the central hypothesis of our study is that, although social networks have been identified as fueling and perpetuating practices of petty corruption, they can also be harnessed to promote positive anti-corruption behaviours. Specifically, we propose using "Governance Clubs" and their community opinion leaders to deliver behavioural interventions that have shown promise elsewhere but have often lacked the right delivery mechanism to robustly test their effectiveness at scale.
