

Research Project

Governance of Risk and Sustainability

Project funded by own resources

Project title Governance of Risk and Sustainability

Principal Investigator(s) [Burger, Paul](#) ;

Co-Investigator(s) [Emmenegger, Rony](#) ;

Organisation / Research unit

Departement Gesellschaftswissenschaften / Fachbereich Nachhaltigkeitsforschung

Departement Gesellschaftswissenschaften / Nachhaltigkeitsforschung (Burger)

Project start 01.02.2019

Probable end 31.01.2025

Status Active

As ultimate threat to human existence, risks have been key objects for governmental interventions in the Anthropocene. Departing from technocratic models of risk assessment and management, this research project problematizes a depiction of risks as natural processes „out there” that can be assessed and managed. It rather suggests an analysis of risk governance within shifting human-environment relations – with facts and values about risks being co-produced within social and institutional networks. The following questions are at the core of this project: How is knowledge around risks (and security) produced in situated practices? How are choices and decisions around risks made and legitimized? And, how does the uncertainty, complexity and ambiguity that characterize risks affect the ways they are governed and contested? Addressing these questions through theoretically-inspired empirical research on risk governance in Switzerland, this research project aims at contributing to a critical and reflexive engagement *with and of* an advancing „risk society”.
