Counselling on STIs during emergency contraception dispense in community pharmacies

Project funded by own resources

Project title Counselling on STIs during emergency contraception dispense in community pharmacies

Principal Investigator(s) [Arnet, Isabelle](#) ;

Co-Investigator(s) [Hersberger, Kurt](#) ; [Haag, Melanie](#) ;

Project Members [Wittwer, Nina Lea](#) ;

Organisation / Research unit

Departement Pharmazeutische Wissenschaften / Pharmaceutical Care (Hersberger)

Project start 06.01.2018

Probable end 31.12.2020

Status Completed

Since 2002, Swiss community pharmacists dispense emergency contraception (EC) as pharmacist-only medicine. During unprotected sexual intercourse, the risk of sexually transmitted infections (STIs) rises. Especially Chlamydia infection is highly present among young women in Switzerland. Thus, addressing the risk of STI during a consultation on EC might represent a public health intervention. We aim at investigating if community pharmacists address the risk of STI during a counselling consultation on EC. We will conduct a simulated patient study with 5th year Pharmacy students.

Keywords Community pharmacy, emergency contraception, sexually transmitted infection, simulated patient study
