Research Project

SARS-coV2 variants Evaluation in pRegnancy and paeDlatrics cohorts

Third-party funded project

Project title SARS-coV2 variants Evaluation in pRegnancy and paeDlatrics cohorts

Principal Investigator(s) [Bielicki, Julia Anna](#) ;

Organisation / Research unit

Departement Klinische Forschung / Pädiatrische Klinische Forschung

Bereich Kinder- und Jugendheilkunde (Klinik)

Department

Departement Klinische Forschung

Project start 01.11.2021

Probable end 31.10.2023

Status Completed

VERDI is a project aiming to describe the impact of variants of concern and the role of children in the transmission of SARS-CoV-2, in their homes and schools, how the infection impacts clinical disease in children and adverse pregnancy outcomes, and treatment. The project will also investigate vaccine strategies in children and pregnant women on disease and transmission in the face of new VoC. This evidence will allow us to rapidly deliver recommendations on the best strategies to control viral spread in paediatric populations, as well as on optimized clinical management and treatment of COVID-19 children and pregnant women.
