Research Project

Adherence consultation for pharmacists

Project funded by own resources

Project title Adherence consultation for pharmacists

Principal Investigator(s) [Arnet, Isabelle](#) ;

Co-Investigator(s) [Barbati, Selina](#) ;

Organisation / Research unit

Departement Pharmazeutische Wissenschaften / Pharmaceutical Care (Allemann)

Project start 01.01.2022

Probable end 31.12.2024

Status Active

Poor adherence to medication is a worldwide problem with some major consequences being ineffectiveness of the treatment, poor health outcomes, and increased health care costs. Some services exist to improve medication adherence in community pharmacies, such as the delivery of a pillbox. However, no structured consultation exists that is rooted in behavioral theory and assesses medication use with electronic monitoring. This project will develop and test a 2-step consultation for community pharmacies aimed at assessing medication use with electronic monitoring (initiation or implementation phase) and optimizing adherence.
