Departement Umweltwissenschaften / Naturschutzbiologie (Baur)

Department

Project start 01.01.2009

Probable end 31.12.2011

Status Completed

A part of an INTERREG project.

The aims of this project is to determine the genetic structure within adder (*Vipera berus*) population in Northern France (Pas-de-Calais region). In addition, a grasshopper living in similar habitats (*Stenobothrus lineatus*) will also be investigated in order to evaluate if both species show similar genetic structure.

Financed by

Commission of the European Union
